EASY APPLICATION

Use straight from the container with no mixing or dilution. Shake well.

Use immediately after trimming or pruning.

Can also be applied to old wounded surfaces.

Apply using a brush or sprayer.

Can be sprayed over the entire plant if necessary to achieve proper coverage and cannot harm any plants including your lawn.

EASY CLEAN UP

Clean brushes or sprayers with soap and water.

TREE BANDAGE®

It's like having a window over the wound

- **Non Toxic**
- **Safe**
- **Easy To Use**

TREE BANDAGE®

It's like having a window over the wound

A unique product completely different from those traditionally used to treat pruned or damaged trees.

Non-toxic, non-hazardous with zero VOC and will not harm the tree or bush.

A silicate in water that penetrates into the wound and provides a permanent seal that becomes part of the tree.

In the next section is a picture of two 150 year old oak trees that were trimmed in 2001 and treated with Tree Bandage. Below that are 2 pictures of large cut wounds that are now fully callused.

Totally New Technology That Actually Works!

TREE BANDAGE®

It's like having a window over the wound

1. The bandage will begin forming within minutes of application and becomes part of the tree.
2. The bandage stops fluid loss.
3. The bandage compartmentalizes the wounded areas.
4. The bandage is **NOT** a tar or paint based product that will crack or peel.
5. The bandage allows calluses to form over the wounded area.
6. The bandage has been in field tests for over 20 years.
